The Problem and Its Background

This chapter will provide an overview of the background of the study. The general problem will also be stated, as well as the enumerated specific problems that the study will encounter. Furthermore, it will address the significance of the study as well as provide an overview of the current state of technology that is related to the project the researcher will develop. Moreover, the general and specific objectives of the research. Additionally, the scope and limitations of the research.

Background of the Study

A dictionary is one of the primary sources for knowing the definition of a certain word and understanding its usage. It has been widely known and used by many since it is accessible, easy to use, and convenient for everyone. Different types of dictionaries have helped language learners find the meaning of unfamiliar words, aided them in forming correct sentences, and provided them with word-processing tips usage in the appropriate context.¹ Through a dictionary, the users obtain knowledge and understand the meaning of

the word and use it in the right context. It gives a comprehension of certain words and improves the user's vocabulary.

Dictionary has been used as a traditional type of book wherein can be used as a handbook because it is easy to bring and convenient to use. But as the world progresses, technology rises up. Technology is designed and created to serve specific functions to people. It has to be functional to receive appropriate appreciation from its users.² Technology has the purpose to make life easier and convenient to the user. The one that people that are used to in traditional form can be accessed through technology. Thus, technology has been utilized so extensively in this generation that almost everyone in society uses it. One of the technologies that is used nowadays is the mobile device. By the year of 2019, there are 73% of the population who own a mobile phone, 7% are under phone sharing, and 20% of the population do not own a mobile phone in the Philippines.³ In this generation, the most prominent

PRENTISS NATIONAL HIGH SCHOOL

medium that is used are the mobile devices that most people use since it is very handy, convenient, and has many capabilities in one device.

Due to technology, dictionaries can be accessed in any mobile devices that can be downloaded through application. On mobile devices, users can now access mobile dictionaries that are very useful for most people, so they can search for a certain word in their mobile instead of the physical book of dictionaries. Electronic dictionaries (EDs) are becoming increasingly common as language learners employ new technical tools for vocabulary study on a larger scale.⁴ People are now so fond of using mobile devices that even when using a dictionary, they access it through mobile applications. Due to this, people in this generation are more familiar with a mobile dictionary than a physical book of a dictionary. Technology offers students crucial learning tools that enable cooperative learning and provide new alternatives for strengthening language abilities via experimentation.⁵ The aspect of technology usage, which likewise grows frequently, has the greatest impact on language in this generation. Using technology has allowed individuals to come up with inventive ways to make difficult languages simpler to comprehend. Because of the benefits

PRENTISS NATIONAL HIGH SCHOOL

that technology may provide, it is much simpler to generate words and language, allowing a language to evolve more quickly.

As the medium's usage transitioned, so did the people's usage of language. Generation by generation, pronunciations evolve, new words are borrowed or invented, and their rate of change varies.⁶ A language is continuously growing, developing, evolving, and adapting over time by the people who use it. language has changed and evolved to make an easier language that they can use to communicate that is easier to understand and convenient. The language will change as long as the user of the language changes. It reflects the changing lives, cultures, and societies that are mirrored in language. Words and their meanings have been created and invented so that they might be utilized by numerous individuals according to their needs. A new unique word is created and generated out of 5,400 words each year based on specific needs.⁷ New words are constantly developing, and one of the language variations that contributes to this is the informal language.

One of the languages that evolves thoroughly is slang. Every generation has its own slang, which is rapidly evolving as older terms and phrases are replaced by more recent ones. Slang is a creative expression and a method for people to freely express themselves. The slang term emphasizes adopting a flexible linguistic environment since the message expressed is relative. It depends on who uses it, what generation they belong to, what group they are a member of, and the context in which the slang phrase is used. However, because only members of the same generation or group as the ones who use it can comprehend it, there is a communication barrier to those outside the group. Slang helps people exclude those who do not understand the subcultural interactions that are taking place while simultaneously allowing them to identify with those who have similar interests.⁸ Slang is a technique used by a certain group to keep outsiders and members of the group apart or to prevent passersby from overhearing their conversations. Slang, unlike other casual speech styles, has the power to evoke feelings of community, group membership, and separation from those who do not belong, which makes it unique among informal speech styles.

The ones who started using slang words are the young ones from their generation. Due to this, it circulated among one another and became part of their generation. And in

SCHOOLS DIVISION OF BULACAN
PRENTISS NATIONAL HIGH SCHOOL

today's world, due to the internet and mobile devices. It has been observed that exposing people to different internet genres gives them the chance to familiarize themselves with informal language that is not generally available in textbooks.⁹ Many people of today maximize the usage of mobile technology to circulate their slang words that can be associated with them. Different generations have different ways to circulate their slang. The slang that they invented may be quickly disseminated and accepted by the general public at their similar ages due to their wittiness and inventiveness. So there are different aspects of the dictionary that are not in their scope due to the slangs that were invented by different generations.

As stated in recent studies, slang creates communication barriers to exclude people who don't understand what they have said. With generations that have lived in different times and language used, these generations tend to have a language gap between them. The following generation began to experience a generational language gap as the language grew. It may be the root of communication issues between different generations since it produces a gap in language understanding between them. The active generations today are the Baby Boomers, Generation X, Generation Y, and Generation Z, who have various age gaps that

⁹ Godwin-Jones, Robert. "Chasing the Butterfly Effect: Informal Language Learning Online as a Complex System." . . *Language Learning & Technology*, 22, no. 2 (2018): 8–27. <https://doi.org/10125/44643>

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTZA NATIONAL HIGH SCHOOL

cause their languages and ways of interacting to change. That is, their age differences create a divide since their social circle has different discussions that only they understand.

Additionally, because of the current generation's quick changes in language, they do develop linguistic gaps with one another.

This study is based on SLANGit, a dictionary application that may be used as a user-friendly Android-based software. A dictionary application that can be accessed online and offline is intended to collect and define slang terms that have passed down through generations and were used by individuals of all ages.

Through this, it will address the generational language gap between different generations and find a better solution without inconveniencing anyone. The comprehension gap will be addressed and resolved with the help and usage of technology, specifically with application. Since technology is one of the reasons for the language gap, it can be addressed through technology. It includes slang and trendy phrases that certain generations might not be familiar with. The app can help reduce miscommunication between generations who do not understand the language spoken by the people they communicate with. By using that, it can minimize the barriers to communication between the generations.

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTZA NATIONAL HIGH SCHOOL

The main goal of this study is to establish a connection among the different generations despite the language differences. Using the SLANGit app will ensure that neither person encounters communication difficulties that prohibit them from understanding one another. Making it easier for different generations to communicate since it leads to understanding each other despite the fact that they utilize different communication languages

General Problem

How will the researchers develop a mobile application for Android users with the capability to compile and define slang words, which can help people better understand the different slang used by different generations.

Specific Problems

- 1. How to develop an application that will help the generations understand the specific slang words that they encounter.**

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTZA NATIONAL HIGH SCHOOL

There are numerous slang terms that have been used by various generations. It is used in ways that others cannot understand by other generations in their day-to-day activities. A particular slang word has meanings that only members of that generation are aware of.

- 2. How to collect, gather, and obtain slang words from different generations that have the right meaning and can be used rightly in context.**

Words that are hard to find and understand are mostly only accessible online, and do need to thoroughly search the information given from unreliable sources that contain wrong definitions of the words.

- 3. How will the users access the application online and even offline.**

Some people find it more convenient to use an application that can be used both online and offline. To use and view the dictionary while offline, because some users have a Wifi connection that can be accessed from their houses, while others have a prepaid load with limited data and can access the internet. However, viewers have the option of viewing online content.

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENZA NATIONAL HIGH SCHOOL

4. How to develop an efficient dictionary and still be entertaining for the user.

Users that download a dictionary on their mobile devices do not utilize it in their daily lives since they do not require it most of the time, and it is also not interesting to stay in a dictionary app for an extended period of time.

Significance of the Study

This study aims to develop a tool that will assist in providing the definition and context of slang phrases to people who are unable to comprehend slang words from different generations. The SLANGit dictionary application will assist those who are unfamiliar with slang words from different times by providing an efficient slang dictionary application to help them familiarize, learn, and educate people about slang words that are frequently used by different people in different generations. The following individuals would benefit from the conducted research:

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTIA NATIONAL HIGH SCHOOL

Generation X. The application will help Generation X understand the languages that the following generations after them use as they interact in their daily lives. Given that certain slang words are not fit or appropriate for young people, Generation X can improve guidance for the younger generation ahead of them with their usage of words.

Generation Y. The application will help Generation Y be able to keep up with the words that have been generated recently that some have found confusing. With application, it can help people better understand slang words that have come up in the past and present and use them in their daily interactions.

Generation Z. The application will help Generation Z understand the proper use and meaning of the slang words they use in interactions. And discover slang words that have been made by different generations that they can use and revive.

Generation Alpha. The application will help Generation Alpha have an additional understanding of slang words that the slang dictionary application provides. Since they are the youngest among the generation, they can discover and learn words that are made and avoid inappropriate slang words.

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTZA NATIONAL HIGH SCHOOL

Community. This application will enlighten community members about slang terms and their meanings, enabling them to use them to communicate more quickly and interestingly. The study will give people the chance to express their creative minds and use or create slang to represent their community.

The Researchers. The study will be valuable for the researchers as it will be the instrument that guides them in collecting data and information for future studies. The future researchers will use the information they have acquired to enlighten those who are new to the use of slang and determine the strengths and weaknesses of using slang in modern communication.

Overview of the Current State of Technology

The dictionary is the primary tool that people use when they encounter unfamiliar words. The dictionary is the leading source for finding definitions, word origins, synonyms, antonyms, and pronunciations of words. The dictionary first developed as an educational text that could be read in the book published by Robert Cawdrey in the year 1596. In modern technology, people often use mobile devices rather than read books. That gave people a chance to develop an online dictionary using technology for easy access. Develop an

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENZA NATIONAL HIGH SCHOOL

application that can help people understand each other across language barriers. One of the examples is the slang dictionary that recently developed as slang was the newest language that people used in communication.

- **Merriam Webster**

Merriam Webster is a dictionary mobile app that provides people to familiarize themselves with words. Its features included word definitions, synonyms, illustrations, audio pronunciation, voice search, and mini-games. The two features that could be adapted from Merriam Webster are its audio pronunciation and voice search.

- **Deepstash**

A Deepstash application is a mobile-friendly application that can help to learn something new about anything you are interested in. Its features include the ability to search and filter your ideas, get personalized recommendations, access mobile apps, create your own list, and get offline access. The features that could be adapted from

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTISS NATIONAL HIGH SCHOOL

deepstast are in the SLANGit app, where you can create your own list, have offline access, and access the mobile app.

General Objective

To develop a mobile application for android users with a capability to compile and define slang words, which can help people to better understand the different slang used by different generations.

Specific Objectives

- 1. To develop an application that will help the generations to understand the specific slang words that they encounter.**

To create an application that can find the meaning of a certain word through a search engine and come up with its own meaning and context to fully understand the slang

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTIA NATIONAL HIGH SCHOOL

words. Further, this application gives convenience to the user by suggesting slang words on the homepage of the app to give more insights on the other slang words.

- 2. To collect, gather, and obtain slang words from different generations that have the right meaning and can be used rightly in context.**

To be an application that has the credibility to define and give context to words so the user can trust the application without doubting the meaning that the words define. Choosing the right slang for certain generations with the right definitions is important, as some generations may understand terms differently from other generations.

- 3. To access the application online and even offline.**

An application that allows users to choose between offline and internet information. By accessing the dictionary database, it can be used even without an online connection. To be able to browse a dictionary without an internet connection while

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTZA NATIONAL HIGH SCHOOL

remaining visible and searchable for the definition of slang words. It can also be used online to gain access to other content.

4. To develop an educational and still entertaining dictionary for the user.

To create an application that can both educate and entertain users by teaching them new slang terms.

Scope and Limitations of the Study

Scope

Hardware

Mobile Devices

The primary device where the SLANGit app will run and be able to provide the users with a dictionary for slangs, quick and efficient to use for every generation.

Desktop Devices

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTIA NATIONAL HIGH SCHOOL

The device where the app will be created and programmed and to test the prototype version of the app.

Router

It is the tool that will be used in developing the app and gathering all the words that will be set in the app on the internet. This is needed when the research will code and program the application.

Software

Android OS

Android OS is the operating system that runs the devices which enables users to access and use apps.

Internet Network

Internet network is essential for accessing the required information, including slang words, app codes, and utilizing Andromo effectively.

Andromo

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTZA NATIONAL HIGH SCHOOL

The software that the developers used to build SLANGit is Andromo, which visualizes the code as it is being created therefore developers can track the progress of the app.

Canva

The software which is used to create the visuals and icons for the app.

YouTube

SLANGit uses YouTube as the video streaming provider for the reels function of the app, which needs one to display the videos.

Google Play Store

The SLANGit app will be available in Google Play Store to be downloaded with no cost.

Firmware

Programming Language

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENZA NATIONAL HIGH SCHOOL

This is the fundamental workings of the app and it will be used in developing the app's behavior and to be coded properly. The programming language the app will use is C++ and HTML

Limitations

The SLANGit app faces limitations in different factors:

1. Apart from Tagalog and English, it is not accessible in any other language.

SLANGit is only limited to English and Tagalog slang words; therefore, other users who do not know English or Tagalog may encounter a language barrier.

2. Newer words would not be added automatically unless updated.

SLANGit may have a hard time keeping up with slang words' rapid pace of changes and development as new slangs can appear on anything at any time. One of the

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTZA NATIONAL HIGH SCHOOL

factors contributing to this is that only the developers can add the slangs to the app, as there are only 3 developers.

3. Usage of SLANGit may vary from different regions.

SLANGit has limitations geographically, as some areas may not use slang all the time. Most areas may use words differently based on culture and social traits.

4. Its is not accessible to Android 1.0 to 10

As per the version requirements, the SLANGit app is limited to Android devices with versions 11 to 13.0, as devices running Android 1.0 to 10 are not recommended by the application since other complications in using the app will occur.

5. It is not available for IOS devices.

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTZA NATIONAL HIGH SCHOOL

SLANGit will not be available for IOS-supported devices as the app is developed in Android Studio, an Android software intended for creating apps for the Google Play Store, meaning the SLANGit app is only exclusive for Android devices.

Review of Related Literature and Studies

This chapter details the analysis and review of related literature, both foreign and domestic, that served as the study's foundation and support. The study of related literature and studies will provide an overview of past work as well as new information and insight for the researcher, allowing the researcher to obtain a clear comprehension of the subject. In addition, this chapter contains theoretical and technological foundations to support the researcher's investigation. It also covers the research methodology and research paradigm, which will demonstrate the relationship between study variables.

Theoretical/Technical Background

The study is anchored in the theoretical support of Skinner's (1966) theory of behaviorism and Mannheim's (1936) generational theory as they relate to each unique literacy style, supported by Verschueren's (1987) linguistic adaptation theory (LAT) that provides sapience and an approach to language use.

Skinner's (1966) theory of behaviorism indicates that behavior is assembled on the foundation of consequences or reinforcers. These could have a positive or negative impact on

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTISS NATIONAL HIGH SCHOOL

the person based on what they've learned from their experience. When an existent is youthful, he or she will observe the examples of behavior around them, and this would include communication styles.¹⁰ They can simply understand and apply what they learned in their own terrain to what they see, watch, or view. This results when the individuals admit a response from another that they can both understand and learn from. Further, Skinner (1966) stated that the observed actions and the consequences they brought about would elicit an emotional response to any kind of situation that individuals experience.¹¹ This concludes that the learned actions could be the basis of what the individualities have in their literal environment, which is generally analogous to it.

Combine this with the theory of Mannheim (1936), which explained the differences in how individuals of varying periods perceive information. Similar to Skinner's (1966) behaviorism theory, the experience allows individuals to learn. The way individuals communicate their actions to other individuals could help in developing and controlling what expressions or actions they are going to express.¹² According to Mannheim (1936), generational theory considered the geographical and historical position of individuals. Which aims to raise the benefits of understanding individualities in their own generation and how

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTISS NATIONAL HIGH SCHOOL

they concentrate on social relations. Additionally, every generation has specific communication styles that may collide with the style of another generation.¹³ Likewise, the generational theory proposed by Strauss-Howe (1990) explained a recreating cycle of age cohorts called ‘generations’ with specific patterns of behavior that change every 20 years. That caused the four generations, which are Generation X, Generation Y, Generation Z, and the Alpha Generation, to be associated with an extremity or language gap and ultimately produce a new one. Therefore, Strauss and Howe’s generational theory holds that the juncture and awakening events in history will affect the generations living through them. Also, the generational theory of Mannheim (1936) stated that it focuses on social relations between individualities of organized social groups" to maintain the functionality of a group.¹⁴ This will help the generations be organized, as the four generations could interact with a language gap in brisk changes. Mannheim (1966) believed that studying generation provides a companion to understanding social structure and included the factors of individuality as well as the parallels.¹⁵

SCHOOLS DIVISION OF BULACAN
PRENTISS NATIONAL HIGH SCHOOL

These theories are supported by Verschueren's (1987) linguistic adaptation proposition, which claims that verbal choice includes important aspects that have a great influence on the process of making choices and contribute to communication accomplishment easily. This would apply to the process of an individual having communication with another individual that focuses on receiving and understanding the important conception of the adaptation theory process. That stated, every generation has a language gap between them that could be caused by an extremity in their communication. The theories stated that the actions that individuals learned would affect their individualities and also the communication between generations. Still, older generations are accustomed to speaking in their native tongue, which may result in a language barrier for the younger generation.

Mannheim (1936) stated that the generational theory is also an understanding of generations that cannot be done merely in a quantitative way because understanding relies on inner lived experience.¹⁶ This would explain that the older generation's way in communication will have learned behaviors from learned experiences. Mannheim (1936) proposed the belief that one's generation group greatly influences their perception of the

world and the behaviors of individuals, like Generation Z, which has an impact on communication in four generations.¹⁷

Foreign and Local Articles

In these articles, the developers researched about the existing and related devices to the project that served as a guide for improving the SLANGit application.

- **The Use of Dictionary**

A dictionary is a reference book that contains information on the forms, pronunciations, functions, meanings, etymologies, spellings, and idiomatic uses of words in a certain language.¹⁸ The definition of words that need to be comprehended can be found in a dictionary as a main source. It indicates that unfamiliar terms encountered can be discovered in a dictionary and provides other information that a person needs to know. Usage of the dictionary encompasses the currency of the entry-words, and the frequency of their usage.¹⁹

PRENTISS NATIONAL HIGH SCHOOL

The value of employing dictionaries in the teaching and learning of languages cannot be denied. It is evident that the dictionary may be an extremely beneficial learning resource, especially because it allows the learner to become more independent of the teacher. Dictionary has been used as a traditional type of book wherein can be used as a handbook because it is easy to bring and convenient to use.

A dictionary has been used for educational purposes as it teaches the users to acquire new words through scanning it.

- **The Electronic Dictionary**

Dictionaries can be accessed in any mobile device that can be downloaded through application. On mobile devices, users can now access mobile dictionaries that are very useful for most people, so they can search for a certain word in their mobile instead of the physical book of dictionaries. Electronic dictionaries (EDs) are becoming increasingly common as language learners employ new technical tools for vocabulary study on a larger scale.²⁰ People are now so fond of using mobile devices that even when using a dictionary, they access it

²⁰ Barham, Kefah A. "The Use of Electronic Dictionary in the Language Classroom: The Views of Language Learners." *Online Submission* (2017). <https://eric.ed.gov/?id=ED573437>

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTISS NATIONAL HIGH SCHOOL

through mobile applications. Due to this, people in this generation are more familiar with a mobile dictionary than a physical book of a dictionary.

Since the researcher will make an application and a dictionary, the electronic dictionary is the one that the researcher needs because it is a mobile dictionary that can be accessible through a device and can store many vocabularies.

- **Merriam Webster Dictionary**

For vocabulary development, reference, and instruction in the English language, Merriam Webster Dictionary is the most useful Android app. Word games are included in this dictionary app. Learning new words and testing one's vocabulary has never been more enjoyable for everyone from English beginners to absolute word geeks. The app is free and sponsored by advertisements. There is no requirement for an internet connection to access the definitions or thesaurus but you will need one to view images, hear audio pronunciations, and utilize voice search.²¹

²¹ Free but authentic mobile dictionaries: pros and cons | Emerald Insight. "Free but Authentic Mobile Dictionaries: Pros and Cons | Emerald Insight," April 3, 2017.

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTISS NATIONAL HIGH SCHOOL

The researchers adapted the ability of Merriam-Webster as an offline dictionary and can view the definition without the internet. Only the user is required to use the connection if the user wants other content to be visible to them.

- **Urban dictionary**

In terms of development, audience, and content categories, Urban Dictionary has excelled. Instead of the meaning-focused entries the dictionary anticipates from conventional dictionaries, it finds a substantial prevalence of entries that are opinion-focused. Furthermore, Urban Dictionary includes numerous informal, unfamiliar terms as well as proper nouns.²²

The researchers adapted the ability of the Urban Dictionary, as it is one of the dictionaries that defines slang words.

- **PARLA: mobile application for English pronunciation.**

Among all the other aspects of language acquisition, such as grammatical rules and vocabulary, pronunciation is the most challenging. Non-native speakers must study and regularly practice the target language for an enormous amount of hours to obtain a good level of pronunciation.

The pronunciation page is shown, and the user has access to a variety of alternatives, including listening to the native speaker, changing the word, viewing the IPA phonetics, and, of course, testing his/her pronunciation.²³

The researcher adapted the pronunciation audio used to be able to hear the pronunciation of the slang words in the application, which can help the user pronounce the words correctly.

- **Elasticsearch for Search Engine**

Elasticsearch is a distributed search and analytics engine that runs in real time. It enables you to study your data at never-before-seen speeds and scales. It is used for full-text search, structured search, analytics, and all three together:

Wikipedia uses Elasticsearch to provide full-text search with highlighted search snippets, and search-as-you-type and did-you-mean suggestions.

The Guardian uses Elasticsearch to combine visitor logs with social-network data to provide real-time feedback to its editors about the public's response to new articles. -

Stack Overflow combines full-text search with geolocation queries and uses more-like-this to find related questions and answers.

GitHub uses Elasticsearch to query 130 billion lines of code. But Elasticsearch is not just for mega-corporations.

It has made it possible for several firms, including Datadog and Klout, to prototype ideas and transform them into scaleable solutions. Elasticsearch may run on a single computer or expand to hundreds of servers and petabytes of data. Elasticsearch as a whole is

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PREZA NATIONAL HIGH SCHOOL

neither novel nor groundbreaking. Full-text search has already been accomplished, as have analytics systems and distributed databases. The merging of these individually beneficial elements into a single, unified, real-time application is the revolution. It provides a minimal barrier to entry for beginning users, but it can grow with you as your abilities and requirements evolve.²⁴

The researcher adapted the function of the search engine to be able to search for the words that the user wanted to find.

- **Fluentu**

Fluentu is made up of actual resources such as news, conversations, public speaking speeches, and motivating videos. Fluentu transforms actual information into language learning classes. Each video has a specific vocabulary that helps students improve their public speaking skills. After watching videos, they were given flashcard activities.²⁵

The researcher adapted the function of having video material to help them understand more about the usage of the slang words.

Related Studies

- **Mobile-assisted language learning (MALL)**

The use of technology in teaching and learning environments is an essential element that has gained a lot of attention in recent years. One of the most alluring technologies is mobile technology, which offers a distinctive way of learning. As a result, mobile learning has gained popularity as one of the most popular components of language learning. Learning materials may be more easily available due to the mobility and accessibility of mobile devices. Mobile-assisted language learning (MALL), in which learners utilize mobile technology to engage in language study, is one area of increasing growth.²⁶ Furthermore, MALL has the potential to allow language learners to study the target language independently and without regard for time or location and has a feature of flexibility based on the user's need.

²⁶ Arvanitis, Panagiotis, and Penelope Krystalli. "Mobile Assisted Language Learning (MALL): Trends from 2010 to 2020 Using Text Analysis Techniques." *European Journal of Education* 4, no. 1 (June 1, 2021): 13–22. <https://doi.org/10.26417/ejls-2019.v5i1-191>.

Many programs available for language learners to download through simple internet access have one of the MALL capabilities. The use of mobile learning to build various language abilities may be improved with the use of a specific app category.²⁷ The vocabulary and language abilities of the app's users are enhanced with the aid of an application that has the ability to educate and collect data about a certain language.

In a similar study, it found that mobile applications aided users in gradually acquiring vocabulary items and increasing their writing and reading abilities.²⁸ They increased their knowledge when they were exposed to language input by learning, recalling, and growing used to the sounds, new words, and other contents of the target language. By using a mobile app, the user is encouraged to learn more about the language with which they engage. It is portable and can be used anywhere, allowing the user to learn new words while also learning more about the language.

- **Vocabulary Learning Through Digital Dictionaries**

Vocabulary learning is an essential component of language acquisition. Therefore, using mobile devices to improve vocabulary acquisition is an option. Several researches have been carried out to investigate the influence of mobile devices on vocabulary learning. The use of mobile devices can be beneficial in practically all aspects of vocabulary learning.²⁹ With spaced repetition, which is thought to be more successful than massed repetition, vocabulary items are exposed to a person when they utilize mobile devices for vocabulary learning. With the use of a vocabulary study app for mobile devices, one's vocabulary is subsequently improved. One of the applications that can improve vocabulary knowledge is the dictionary app that is available to download with the usage of data connection. Digital dictionaries address the issue of cognitive load by allowing a person who uses them to quickly and effectively access a definition, etymology, usage example, and even pronunciation audio.³⁰

Research Methodology

In terms of approach, the researchers adopted the Fourth Generation Technique (4GT) as a model. The model has the capability of generating source code, which can aid in the functionality of the software. The 4GT paradigm for software focuses on the capacity to specify software using specialized language forms or a graphic notation that conveys the issue to be resolved in terms that the client can comprehend. A 4GT paradigm includes various processes to fulfill the developer's software aim. The 4GT paradigm is divided into four steps: requirement gathering, design strategy, implementation using 4GT, and testing.

4th Generation Technique (4GT)

Figure 1.

Requirements Gathering

Requirements Gathering is the necessary process of collecting the components needed for developing, solving the issues, and testing the app. All other phases of the project will remain incomplete if the requirement gathering has not been completed. It will need to be a precise phasing, as the requirements will be used throughout the start and end of creating the app with a very systematic plan. The developers will begin gathering the requirements needed to develop the application. the physical equipment required to create the application, such as computers and smartphones. Locate a software developer or app maker who can assist the researcher in creating the application. Establish the fundamental framework for the program so that it can function and be of service to users. By gathering requirements for the application, the plan set in development should and must be followed to achieve the objective planned.

Design Strategy

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTISS NATIONAL HIGH SCHOOL

The concept and design that the program required were first structured by the developers before the application was actually coded. The design and functional tools that would be included in the program were being created by the developers. This comprises the sound effects, animation, and functional tools that will be used by the application.

Implementation using 4GT

The system that will be used to build the mobile version of the SLANGit Dictionary will be implemented using fourth-generation approaches. The fourth-generation techniques will aid in the creation of the system structure for the programming involved in the creation of the application. The proponents will use Andromo to construct an English and Filipino slang dictionary for Android in order to accomplish their objective. This will aid in the conceptualization of a structure for constructing an application and ensuring that the SLANGit Android application is efficient and functional in terms of developer plans. When the developers of the Android application run into various problems throughout the coding process, debugging will be used.

Testing

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTISS NATIONAL HIGH SCHOOL

The developers must conduct testing and provide meaningful observations and documentation of the application's performance. The developers test the program to verify if it functions after it has been created. When the application is successfully operating, its supporters attempt to run it on Android phones and tablets.

Research Paradigm

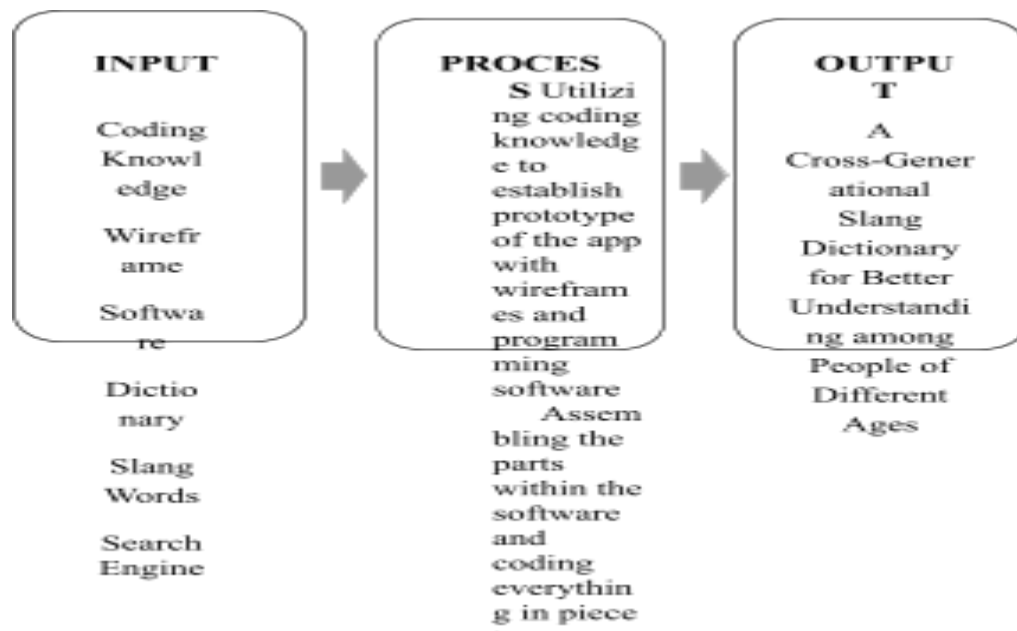

Figure 2. The process which researcher used to create the Slangit app

The research paradigm shows an input-process-output model (IPO Model), where the input includes coding knowledge, constructing wireframes, software for coding, a dictionary with a list of slang words, and a search engine for easier navigation. The process defines the

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTISS NATIONAL HIGH SCHOOL

ways in which the app will be built, utilizing coding knowledge to establish a prototype of the app with wireframes and programming software, assembling the parts within the software and coding everything in piece to function, and arranging the list of words by generation and assisted by a search engine for easier navigation. The final outcome is a slang dictionary application for Android mobile phones.

Research Methodology

The project will be carried out by the researcher in this chapter, which also demonstrates the method by which the researcher made the project possible. It demonstrates the approaches and procedures employed by the researcher for the study. This chapter also displays the resources that the researcher used to complete the project.

SLANGit

The SLANGit app is an Android application for different generations that enables the user to choose which slang of a generation they want to explore. The project has different navigation options that the user can explore. This is an Android application that an Android user can use. To develop the application, the researcher must first follow a step-by-step procedure.

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENZA NATIONAL HIGH SCHOOL

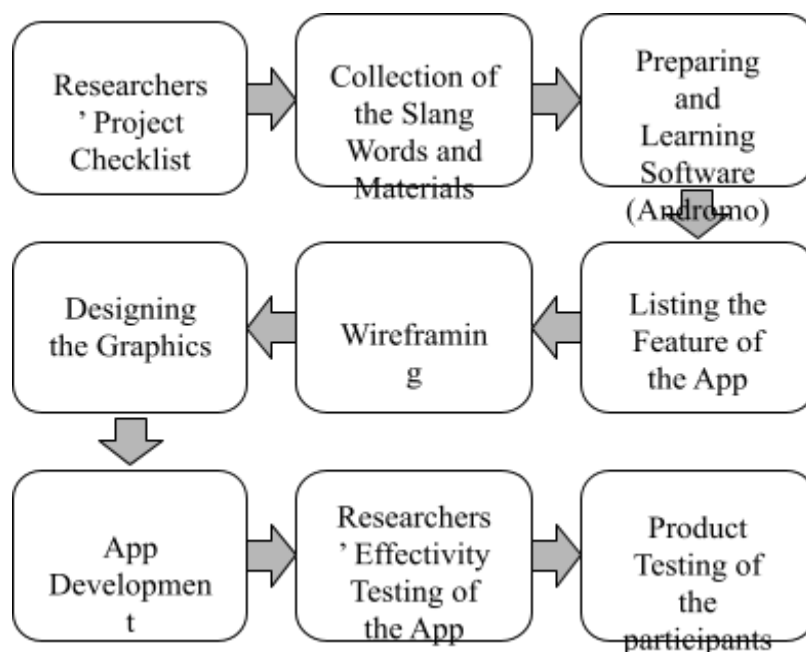

Figure 3. The procedure how the Slang app will be develop

Researchers' Project Checklist. The researchers produced a checklist covering the processes and stages that required to be completed in this investigation. These phases included gathering slang terms from each generation that the researcher required, encoding and programming, and assessing the app's performance.

Collection of Slang Words and Materials. The researcher gathered the materials needed to develop the SLANGit application. The main devices that the researcher needed

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PREZA NATIONAL HIGH SCHOOL

were a laptop and a mobile phone. With these devices, the researcher can now find an app maker to develop the application, which is Andromo. The researcher collects slang terms from different generations on a regular basis in order to include them in the application. These slang terms are the key component of the application and must be gathered in order to meet the goal quantity of slang words.

Preparing and Learning Software (Andromo). To effectively utilize the SLANGit, researchers need to understand how to construct the app using Andromo, which will aid in developing and running the app. The researcher learned how to utilize the app creator by viewing instructional videos and practicing with it. Andromo is an app creator that lets developers see the code as it is being written, allowing them to follow the development of the app. It employs C++ code and will use HTML code to input the information desired by the developer.

Listing the Features of the App. A list of the qualities that the app must have was compiled by the researchers after they assessed the project. Researchers must take into account simple, understandable features that are accessible to users. It also considers incorporating it within the application.

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTISS NATIONAL HIGH SCHOOL

Wireframing. The basic arrangement of the main design elements in the design process, is a method the researchers use to build overviews of the SLANGit app in order to ascertain the structure and flow of prospective design choices. By drawing out a design of the user interface, the researchers can now foresee the final components of the application. Incorporated within the wireframe were the homepage, buttons, locations, body content, header, and footer.

Designing the Graphics. After wireframing, which displays the project's clear structure, designing the visuals would help to make the project more detailed. The researchers have finalized the color schemes, icons, logos, and any other design components that add to the overall aesthetic of the app by this stage. Through this, it will serve as a guideline for the app's development.

App Development. The researcher can start creating the app using Andromo at this point. The researcher is now ready to program the application with the help of visual design since the researchers have finished researching the software, collecting its features, creating wireframes, designing the visuals, and gathering slang terms. The process of designing software that runs on mobile devices and allows SLANGit to work effectively is known as mobile app development. In order to develop the app, it took 40 hours to finish it.

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTISS NATIONAL HIGH SCHOOL

Researchers' Effectivity Testing of the App. Following the development of the app, the researchers were able to examine its efficacy in order to determine the app's strengths and shortcomings, as well as the issues that needed to be fixed.

Product Testing of Participants. To obtain more reliable findings, participants performed the SLANGit by answering the user evaluation honestly.

Resources

Hardware

For system requirements, this is the most crucial section. The following is a list of features that are suggested for hardware and software requirements.

Minimum Requirements:

Phone (Android 6 or higher)

100 Megabytes Internal Memory

50 Megahertz Processor

4G (Wi-Fi/Mobile Data)

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTISS NATIONAL HIGH SCHOOL

Recommended Requirements:

Phone (Android 11 or higher)

300 Megabytes Internal Memory

200 Megahertz Processor

5G (Wi-Fi/Mobile Data)

Software

Google Chrome

The platform where Andromo runs.

Andromo

Andromo is used to build the app in all aspects.

ChatGPT

This is the software where some of the components will come from.

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTZA NATIONAL HIGH SCHOOL

Canva

Software where the visuals and icons for the app will be designed.

ElevenLabs

This software provides the voice pronunciation for every word in the app.

YouTube

The videos from the internet in the reels section of the app will come from YouTube.

Firmware

Programming Language

C++ is the main programming language that Andromo uses to build the main interface and functionalities of the app.

Performance Analysis

This chapter contains the experimental design that the researcher employed in the study to examine the performance of the project that the researcher undertook. In this manner, it will be easier to compile the findings and evaluate the conclusions the researcher reached.

Experimental Design

The experimental design of the investigation is introduced in this chapter. The researchers address the factors influencing the system and give the study's dependent variables. To determine whether the file types of the system's components were appropriate for the programming language being used as the platform for the system's development, the proponents evaluated every file in the system as part of the experiment.

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTZA NATIONAL HIGH SCHOOL

Result and Analysis

The table shows how the researchers tested the application that had developed throughout the study.

Criteria	Test 1	Test 2	Test 3	Test 4
Accuracy	Not Accurate (10%)	Not Accurate (20%)	Not Accurate (30%)	Accurate (60%)
Storage	37.13MB	23.30MB	24.14MB	36.29MB
Visual	Poor	Fair	Good	Excellent
Performance	Smooth	Smooth	Slightly Smooth	Fairly Smooth
Navigation	Poor	Fair	Good	Very Good

Table 1. SLANGit initial test result

The testing experiment has been conducted, and the table shows the result of the application. Through the process of making the application, the first testing has been conducted, and it shows how the app started poorly due to its inaccuracy since it does not have much content but occupies the largest storage among the tests. The second testing has seen an improvement since the researcher added some content, changed the user interface to what the researcher designed, and managed to lessen the storage. In the third test, more

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTZA NATIONAL HIGH SCHOOL

content has been added to the application, resulting in a decrease in performance. Moreover, the third test shows improvement in the visual aspect of the user interface and in the navigation of the features. The last test that the researcher conducted showed a bigger improvement when it comes to accuracy, visuals, and navigation. But showed a decrease in performance since the more the researcher added content and features to the app, the smoothness and how the app ran became more unresponsive. Additional to that, the space that it accumulates increases with the more content that has been put.

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN

Summary and Conclusions

This chapter contains a summary of the results, which indicates what the researcher's findings are in relation to the study that they have undertaken. Furthermore, it will provide insight into what the researcher concludes during the investigation. Finally, the researcher will make recommendations to future researchers on how to enhance the study in the future.

Summary of the Findings

The researcher finds that the SLANGit app can be constructed using the results revealed by this analysis. Users may be encouraged to utilize the application due to its improved navigation and visual appeal, which were present in the most recent testing and showed a reasonable amount of seamless operation, but with more content and features, the application decreased its performance. By exposing users to slang from various eras through the program, the users' understanding of slang may be improved.

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTIA NATIONAL HIGH SCHOOL

Conclusions

Inconsistencies in communication between the younger and older generations are one of the main reasons why the communication process may shift and be adjusted over time. The main purpose of the SLANGit Dictionary is to bridge the generational language gap by providing definitions and explanations for slang terms used by different generations, facilitating better communication and understanding between age groups. The app has been developed, and every stage of the process has been documented. According to the checklist and testing, tests 1–3 of the apps are underdeveloped and require significant revision and improvement. As the developers concentrated on certain components to significantly improve Testing 4, the app made a quick leap forward and greatly improved. The researchers concluded that using the SLANGit app can improve the user's knowledge of slang from different generations.

Recommendation

One of the languages that has evolved thoroughly is slang. Every generation has its own slang, which is rapidly evolving as older terms and phrases are replaced by more recent

Republic of the Philippines
Department of Education
REGION III
SCHOOLS DIVISION OF BULACAN
PRENTISS NATIONAL HIGH SCHOOL

ones. The researchers have witnessed situations that could be altered or improved further in order to get better results. The developers recommend for the future developers:

1. To be able to represent other generations such as the Lost Generation (1883–1901), Greatest Generation (1901–1927), Silent Generation (1928–1945), and Baby Boomers (1946–1964).
2. The developers recommended that future developers put memes that contain an example of the slang words given; this could help the user have a better understanding of the slang word as the memes in the new generation are popular.
3. The developers also recommend adding other features that could encourage the user to be more interested in the app, like being able to add their own slang words and sharing their own slang words with other users. And they can change the color, font, and brightness of the application itself.
4. The developers recommended that future developers use a computer language that could help them avoid debugging while coding or phone hanging problems when using the application.
